THE CAUSES OF STRETCH MARKS

Stretch marks are usually caused by pregnancy or rapid weight gain. On an average month, Google has about 50,000 people searching the term “How to get rid of stretch marks.”

This common problem is caused by the inability of the collagen and elastin of the skin to stretch as fast as the pregnancy or skin tissue expansion. This exposes deeper layers of the skin that are not normally visible, resulting in stretch marks.

Once you have stretch marks, there are really no topical creams, vitamins, etc, that have been shown clinically to make a significant difference. Some stretch marks may fade over time but regrettably, many will persist.

INTRODUCING The SMART Program for Stretch Marks

At The Center for Women's Aesthetics, we have developed the Stretch Mark Applied Radiofrequency Therapy (SMART) program to treat and improve stretch marks. With SMART, it

is possible to see dramatic improvement with our combination of NanoFractional™ RadioFrequency(RF) and SkinPen®.

SMART can be used on all skin types and any area where stretch marks exist. There is little or no downtime.

OUR INNOVATIVE TECHNOLOGIES WORK TO REMOVE STUBBORN STRETCH MARKS

Venus Versa™ uses NanoFractional™ RadioFrequency(RF) and SmartScan™ technology to deliver energy through the skin's surface, which stimulates fibroblasts and rebuilds collagen. The results are reduced skin damage with minimal downtime.

A unique pin pattern delivers targeted energy to deeper skin layers by creating very small, microdermal wounds. The surrounding healthy tissue helps to heal these microwounds, which improves skin texture.

SkinPen® delivers thousands of microinjuries to initiate the body's wound healing process. The body then begins to break down damaged tissue and produce healthy new cells. These cells repair and remodel the injured tissue, producing organized, healthy dermal tissue such as collagen and elastin.

Contact us at 980-218-9496 and reserve your complimentary SMART consultation today. You will love our team and learning more about this affordable, innovative program.
